RESEARCH SOFTWARE

- **DataEnvelopmentAnalysis.jl** is a Julia package that provides functions for efficiency and productivity measurement using Data Envelopment Analysis (DEA). Particularly, it implements a variety of technical efficiency models, economic efficiency models and productivity change models. <https://javierbarbero.github.io/DataEnvelopmentAnalysis.jl/stable/>
- **TFP Toolbox for MATLAB**: Total Factor Productivity Toolbox is a new package for MATLAB that includes functions to calculate the main Total Factor Productivity indices and their decompositions, based on Shephard's distance functions and using Data Envelopment Analysis programming techniques. The package includes code for the standard Malmquist, Moorsteen- Bjurek, price weighted and share weighted TFP indices, allowing for the choice of orientation (input or output), reference period (base, comparison, geometric mean), returns to scale (variable or constant) and specific decompositions (aggregate or identifying scale effects as well as input and output mix effects). Classic definitions of TFP corresponding to the Laspeyres, Paasche, Fisher or Törnqvist formulations can be also calculated as particular cases. <http://www.tfptoolbox.com>
- **DEA Toolbox for MATLAB**: Data Envelopment Analysis Toolbox is a new package for MATLAB that includes functions to calculate efficiency and productivity measures. The package covers the radially oriented, directional, additive, allocative, Malmquist Indices and Malmquist-Luenberger formulations. <http://www.deatoolbox.com/>
- **Panel Data Toolbox for MATLAB**: Panel Data Toolbox v2.0 is a new package for MATLAB that includes functions to estimate the main econometric methods of panel data analysis. The package covers the standard fixed, between and random effects methods, that are extended to allow for instrumental variables, as well as spatial panel data specifications. <http://www.paneldatatoolbox.com/>
